## Method of Corona Testing

Herewith, I suggest the advancement of testing for Covid19 in terms of adjusting the common swab tests (as described inhere: <https://www.cnet.com/health/how-to-get-tested-for-coronavirus-at-home/> (date and time of access: 17 April 2021 6:28 pm)), especially for children, young people and elderly people and for all self-use: Instead of tests that require you to swab the inside of your nose or cheek to collect a sample that can be tested for the coronavirus, the sample shall be collected by a method using something like a glove (at least about one finger) with which one picks oneself nose to deliver a sample that might be analyzed by commonly known or novel methods (novel might be for example: class testing based-upon the (finger-"gloves" given) sample (potentially contaminous) in group to detect Covid-19 or other diseases in cases where groups or school classes would have have to be quarantined completely in case of one single positive result).

Julia Krueger (date/ place of birth: 04.09.1983, Magdeburg/ Germany), nationality: German, contact: [krueger.julia@protonmail.com](mailto:krueger.julia@protonmail.com)), Berlin, the 17th of April 2021
